

ITA0520 – Computer Vision For Image Analysis

Name: Haresh Kumar N L (192425009)

Experiment 15:

Perform basic Image Handling and processing operations on the image is to read an image in python and detect the corners in the image using Harris Corner Detection function

Code:

```
import cv2

import numpy as np

image = cv2.imread("Person.jpg")

if image is None:

    print(" ❌ Error: Image not found!")

else:

    gray = cv2.cvtColor(image, cv2.COLOR_BGR2GRAY)

    gray = np.float32(gray)

    corners = cv2.cornerHarris(gray, blockSize=2, ksize=3, k=0.04)

    corners = cv2.dilate(corners, None)

    image[corners > 0.01 * corners.max()] = [0, 0, 255]

    cv2.imshow("Harris Corners", image)

    cv2.waitKey(0)

    cv2.destroyAllWindows()
```

Input:

Output:
